

Market voices: Reimagining spaces

Zack Shariff

President & CEO

Allen + Shariff Engineering

“ As the world continues to manage climate change, everyone must do their part by reducing their carbon footprint. Allen + Shari Engineering continuously works with building owners to select systems that are highly energy efficient. We provide control strategies so buildings can operate at their peak when construction is complete. Many jurisdictions have taken energy efficient requirements and incorporated them into their codes. It’s necessary to follow the codes no matter where a project is being developed so the buildings are designed to meet the minimum energy efficient threshold. These regulations will drive businesses to make their projects more energy efficient. It’s an exciting area that will continue to grow for many years to come. ”
